COMMENTS RECEIVED:

DS (Denmark)

Because XML is also used to present the ISAN in human-readable form, we prefer the check digit contained in the XML encoding, so the transformation of XML to displays does not need to calculate the check digit.

JISC (Japan)

1. Annex F: It is not found which XML Name Space defines ISAN. If it is not clarified, ISAN is regarded as a private tag. It is need to clarify tag name for ISAN.
2. Annex F: ISAN are divided by two parts("root" and "episode") which are encoded as attributes, not values. This way is different from ordinary XML schema form(see MPEG-21Part3,ISO/IEC 21000-3). It is need to coordinate XML schema form for ISAN with other standards as like as MPEG-21.

KEBS (Kenya)

This standard is important and [we] support the work of the committee.
