FIG. 9: A 29-year-old woman with extensive AVM involving the left forearm.  
**A:** Brachial arteriogram demonstrates radial artery (arrowhead) and ulnar artery (straight arrow) filling extensive AVM with multiple feeders arising “en passage” from the radial artery, ulnar artery and palmar arch. Note the enlargement and tortuosity of the feeding radial and ulnar arteries.  
**B:** Unsubtracted version of image in A.  
**C:** Venous phase of brachial arteriogram shows multiple dilated veins.
